

# RESOLUTE™ Functional Safety absolute optical encoder system

**RESOLUTE™ Functional Safety (FS) is a true-absolute fine-pitch optical encoder system offering an impressive specification that is certified to Functional Safety standards.**

Patented RESOLUTE encoder technology combines 1 nm resolution with exceptionally high speed, reading from a range of high-accuracy linear tape and spar scales or angle encoder rings.

RESOLUTE encoder systems use a single optical absolute track with a nominal pitch of 30 µm, combined with sophisticated optics. This ensures wide set-up tolerances, very low sub-divisional error and ultra-low noise (jitter), resulting in better velocity control performance and rock solid positional stability.

RESOLUTE FS encoders are for use in Functional Safety applications being certified to ISO 13849 Category 3 PLd, IEC 61508 SIL2 and IEC 61800-5-2 SIL2.

- True-absolute non-contact optical encoder system: no batteries required
- ISO 13849 Category 3 PLd
- IEC 61508 SIL2
- IEC 61800-5-2 SIL2
- Wide set-up tolerances for quick and easy installation
- Resolutions to 1 nm linear or 32 bit rotary
- IP64 sealed readhead for high reliability in harsh environments
- Integral set-up LED enables easy installation and provides diagnostics at a glance
- Operates up to 80 °C with an integral over-temperature alarm
- Compatible with a wide range of linear and rotary scales
- Available with BiSS Safety and Siemens DRIVE-CLiQ serial interfaces

## System features

### Unique single-track absolute optical scale

- Absolute position is determined immediately upon switch-on
- No battery back-up
- No yaw de-phasing unlike multiple-track systems
- Fine pitch (30 µm nominal period) optical scale for superior motion control compared to inductive, magnetic or other non-contact optical absolute encoders
- High-accuracy graduations marked directly onto tough engineering materials for outstanding metrology and reliability

### High dirt immunity

- Advanced optics and embedded surplus code means the RESOLUTE encoder system even reads dirty scale
- Absolute position can be determined in all three cases shown here; clean scale (left), grease contamination (below-left), particle contamination (below)

### Unique detection method

- Readhead acts like an ultra-fast miniature digital camera, taking photos of a coded scale
- Photos are analysed by a high-speed digital signal processor (DSP) to determine absolute position
- Built-in position-check algorithm constantly monitors calculations for ultimate safety and reliability
- Advanced optics and position determination algorithms are designed to provide low noise (jitter < 10 nm RMS) and low sub-divisional error (SDE ±40 nm)

## Optional Advanced Diagnostic Tool

The RESOLUTE encoder system is compatible with the Advanced Diagnostic Tool ADTa-100<sup>1</sup> and ADT View software, which acquire detailed real-time data from the readhead to allow easy set-up, optimisation and in-field fault finding.

The intuitive software interface provides:

- Digital readout of encoder position and signal strength
- Graph of signal strength over the entire axis travel
- System configuration information

<sup>1</sup> ADTa-100 compatible readheads are marked with the symbol **ADT**

## Linear encoder system

### Scale lengths and speed

The maximum scale length depends upon the serial interface, readhead resolution and the number of position bits.

The table shows the maximum scale length and speed for each system:

Serial interfaces	Position bits	Resolution		Maximum reading speed
		1 nm	50 nm	
BiSS Safety	28 bit	-	13.42 m	100 m/s
	36 bit	21 m	-	
Siemens DRIVE-CLiQ	28 bit	-	13.42 m	100 m/s
	34 bit	17.18 m	-	

# Angle encoder system

## Resolution

RESOLUTE encoders are available with a variety of resolutions dependent upon the serial interface being used.

All ring sizes are available for all serial interfaces and resolutions.

Serial interfaces	Resolution	Counts per revolution	Arc second
BiSS Safety	32 bit	4 294 967 296	≈ 0.0003
Siemens DRIVE-CLiQ	26 bit	67 108 864	≈ 0.019
	29 bit	536 870 912	≈ 0.0024

**NOTE:** 32 bit resolution is below the noise floor of the RESOLUTE encoder.

## Accuracy

The table below shows the typical installed accuracy for RESOLUTE readheads with standard diameter RESA30 rings.

RESA30 diameter (mm)	Typical installed accuracy <sup>1</sup> (arc second)	RESA30 diameter (mm)	Typical installed accuracy <sup>1</sup> (arc second)

For REXA30 accuracy figures, refer to the *REXA30 ultra-high accuracy absolute angle encoder data sheet* (Renishaw part no. L-9517-9405).

## Speed

The maximum speed of the RESOLUTE FS encoder system depends on the mounting method and the scale type.

For further information, refer to the *RESOLUTE™ Functional Safety installation guide and safety manual BiSS Safety encoder system* (Renishaw part no. M-9755-9109) or the *RESOLUTE™ Functional Safety installation guide and safety manual Siemens DRIVE-CLiQ encoder system* (Renishaw part no. M-9796-9134). These documents are available at [www.renishaw.com/fsencoders](http://www.renishaw.com/fsencoders).

**CAUTION:** The RESOLUTE encoder system has been designed to meet the requirements of IEC 61800-5-2: Annex E second environment, but must be correctly integrated to achieve EMC compliance. In particular, attention to shielding arrangements is essential.

<sup>1</sup> Current consumption figures refer to a terminated RESOLUTE BiSS safety system. BiSS Safety encoder systems must be powered from a 5 Vdc supply complying with the requirements for PELV of standard IEC 60950-1.

<sup>2</sup> This is the worst case figure that is correct for the slowest communications clock rates. For faster clock rates, the maximum acceleration of scale with respect to the readhead can be higher. For more details, contact your local Renishaw representative.

## Safety sub-functions

The RESOLUTE Functional Safety BiSS Safety encoder and Siemens DRIVE-CLiQ encoder systems provide safe position data that supports the following safety sub-functions defined by IEC 61800-5-2:2016:

- Safe stop 1 (SS1) and Safe stop 2 (SS2)
- Safe operating stop (SOS)
- Safe limited acceleration (SLA)  $\leq 500 \text{ m/s}^2$
- Safe acceleration range (SAR)  $\leq 500 \text{ m/s}^2$
- Safe limited speed (SLS) <sup>1</sup>  $\leq 100 \text{ m/s}$
- Safe speed range (SSR) <sup>1</sup>  $\leq 100 \text{ m/s}$
- Safely limited position (SLP)
- Safely limited increment (SLI)
- Safe direction (SDI)
- Safe speed monitor (SSM) <sup>1</sup>  $\leq 100 \text{ m/s}$

The system must be installed and operated in accordance with the instructions defined by the installation guide. Failure to follow the correct use instructions and failure to heed the limitations may result in PLd and / or SIL2 not being achieved and will invalidate the functional safety certification.

---

**NOTE:** For the maximum permitted speeds for the range of ring diameters refer to the installation guides. These are available at [www.renishaw.com/fsencoders](http://www.renishaw.com/fsencoders).
